The global Pull-Down Internal Broaching Machine market size is predicted to grow from US\$ 605 million in 2025 to US\$ 873 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

The pull-down internal broaching machine is a machine tool specially used for internal hole processing, which adopts the processing method of pulling the tool downward for cutting. Unlike the pull-up internal broaching machine, the tool of the pull-down internal broaching machine starts from the top and passes through the workpiece and pulls downward to complete the processing. This design is suitable for processing longer workpieces, especially in the precision processing of deep holes and multi-level internal holes. Due to its structural characteristics, the pull-down internal broaching machine has high rigidity and stability. It is suitable for scenarios with high requirements for processing quality consistency in mass production. It is widely used in the automotive, aerospace, shipbuilding, engineering machinery and other industries. Typical processing objects include gear inner holes, hydraulic cylinder blocks, cam bearing seats and other parts.

United States market for Pull-Down Internal Broaching Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Pull-Down Internal Broaching Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
