The global Pull-Up Internal Broaching Machine market size is predicted to grow from US\$ 191 million in 2025 to US\$ 275 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

The pull-up internal broaching machine is a high-precision machine tool specially used for precision internal hole processing. It mainly processes the inside of the workpiece through a rotating cutting tool. Unlike the traditional pull-down internal broaching machine, the tool and workpiece of the pull-up internal broaching machine are driven from above. This design can provide higher processing stability and precision. The pull-up internal broaching machine is often used to process large-diameter, high-precision workpieces. It is widely used in internal hole processing in the aerospace, automotive, heavy machinery and other industries, such as engine parts, aircraft parts, rolling bearings, etc. Due to its excellent processing capability and high precision, it is particularly suitable for precision internal hole processing of high-strength, large-size parts, and is one of the indispensable equipment in modern precision manufacturing.

United States market for Pull-Up Internal Broaching Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Pull-Up Internal Broaching Machine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
