The global Pullu-lan Vegetable Capsule market size is predicted to grow from US\$ 629 million in 2025 to US\$ 1280 million in 2032; it is expected to grow at a CAGR of 10.9% from 2026 to 2032.

Pullu-lan Vegetable Capsule is made of pullulan polysaccharide fermented from corn as the main material. It is refined through a unique dipping process and drying technology. There is no risk of cross-linking reaction of amino acids in gelatin, and the drug release speed is relatively fast. It is relatively stable and has small individual differences. It is a safe raw material approved by FDA and is the first choice to replace gelatin capsules.

The public's demand for plant capsules continues to expand, the safety hazards of animal capsules are gradually emerging, the continuous development of pullulan polysaccharide gel production technology, and the continuous regulation of the entire pharmaceutical industry are the key factors that promote the increase in revenue of the pullulan plant capsule market.
