Pulmonary Disease Aerosol Delivery Devices are medical instruments designed to administer medications directly to the lungs in the form of aerosolized particles, facilitating the treatment of respiratory conditions such as asthma, chronic obstructive pulmonary disease (COPD), and cystic fibrosis. These devices include nebulizers, metered-dose inhalers (MDIs), and dry powder inhalers (DPIs), each tailored to deliver precise doses of medication efficiently. By converting liquid medication into a fine mist or aerosol, these devices enable rapid absorption through the respiratory tract, providing quick relief of symptoms and improving lung function. They are essential for managing chronic respiratory diseases, ensuring patients receive effective and targeted therapy with minimal systemic side effects.
