Pulse mode-locked fiber laser is a laser based on fiber technology that can produce high-quality, stable pulse laser beams. Unlike continuous wave fiber lasers, pulse mode-locked fiber lasers have obvious pulse characteristics in the laser output. The working principle of pulse mode-locked fiber laser is to achieve pulse laser output by introducing a modulation mechanism into the fiber laser cavity. Common modulation mechanisms include modulation pumping, modulation loss, and modulation phase. These modulation mechanisms enable the mode in the fiber laser cavity to be locked on a specific pulse mode, thereby producing stable pulse laser output.
