Pulse oximeter sensors and probes are medical devices used to noninvasively measure a patient's blood oxygen saturation (SpO<sub>2</sub>) and pulse rate. These sensors typically consist of light-emitting diodes (LEDs) and photodetectors housed in a clip or adhesive format that attaches to a thin part of the body, such as a fingertip, earlobe, or foot. By emitting red and infrared light through the skin and detecting the amount absorbed by oxygenated and deoxygenated hemoglobin, the device calculates the percentage of oxygen in the blood. Widely used in hospitals, clinics, and home healthcare settings, pulse oximeter sensors are essential tools for monitoring respiratory and cardiovascular health.
