The global Pulsed Electric Current Sintering Service market size is predicted to grow from US\$ 17.41 million in 2025 to US\$ 30.73 million in 2032; it is expected to grow at a CAGR of 8.5% from 2026 to 2032.

Pulsed Electric Current Sintering Service also referred to as SPS/FAST/PECS services, are specialized third-party processing services that use electric current assisted sintering equipment to consolidate powders, preforms, composites or multi-material structures under controlled vacuum, inert or protective atmospheres. The process typically combines a graphite die, uniaxial pressure, rapid heating, Joule heating through pulsed or direct current, and precisely controlled temperature-pressure-time profiles to achieve fast densification, diffusion bonding, prototype fabrication, process window development, pilot production or high-value component manufacturing. This research focuses on externally offered toll sintering, contract R&D, prototype and small-batch manufacturing, open-access laboratory trials, equipment application-center trials, and industrial part production where SPS/FAST/PECS is the core enabling process. Typical material systems include advanced ceramics, refractory metals, cermets, metal matrix composites, functional materials, sputtering target materials, biomedical materials and energy-related materials.
