The global Pulsed TIG Welding Machine market size is predicted to grow from US$ 567 million in 2025 to US$ 884 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

Pulsed TIG welding machine is a welding method that uses argon gas as a protective gas. Through the action of pulse current, a molten pool is generated in the arc action zone. When the arc current is maintained, the molten pool solidifies and forms a welding slope. When the next pulse current is applied, a second welding pool is generated on the area of the solidified welding slope and the base metal. When the arc current is applied, it solidifies into a second welding wave and overlaps with the first welding wave. This cycle repeats itself, forming a weld seam composed of many overlapping welding waves.

United States market for Pulsed TIG Welding Machine is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
