The global Pultruded Spar Cap market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Pultruded spar caps were introduced in the market to improve the stiffness of wind turbine blades. It has become paramount that the wind blade must withstand deflection and stiffness at critical points. Offshore wind turbine blades are now increasingly being developed with carbon fiber pultruded spar caps, as carbon fiber's high strength allows spar caps to distribute loads effectively, reducing material stress and extending the overall fatigue life of the blade. Thus, the design of wind turbine blades is getting more complex and critical. Pultruded spar caps with carbon fiber-reinforced polymer offer greater stiffness and make the blade lighter and thinner. Overall, pultruded spar caps offer robustness, low overall blade cost vs. infusion, lower operational expense, and reduced cycle time. However, pultruded spar caps are more suitable for wind turbines with longer blade lengths.

United States market for Pultruded Spar Cap is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Pultruded Spar Cap is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
