Pultrusion Mold is a molding tool used to shape fiberglass-reinforced plastic (FRP) or other fiber-reinforced composite materials in the Pultrusion process. In the Pultrusion process, resin-impregnated fiber cloth is heated and softened, then passed through a mold to form the desired profile section and cured to produce the final product.

Pultrusion Molds are usually made of high-temperature, wear-resistant metals, such as steel or aluminum alloys. Their design and manufacture take into account the shape, size and specific requirements of the profile being produced and are therefore often custom-made. The internal cavity shape and surface quality of Pultrusion Mold directly affect the quality and appearance of the final profile.

The global Pultrusion Mould market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
