Pultrusion resin used for wind turbine blades needs to meet high standards of mechanical strength, fatigue resistance, and environmental durability. The choice of resin significantly impacts the performance and longevity of the blades. Epoxy resins are generally preferred for their superior mechanical properties and environmental resistance, making them ideal for the main structural components of the blades. Vinyl ester resins offer a balance between performance and cost, suitable for areas requiring enhanced toughness and chemical resistance. Polyester resins, while cost-effective, are typically used in less critical sections due to their lower mechanical properties.

The global Pultrusion Resin for Wind Turbine Blades market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
