The single-line production capacity is approximately 9,000 pieces/month, with an average gross profit margin of approximately 30-40%.Pump Protector is optical devices used to protect pump lasers or fiber lasers/amplifiers. Using components such as narrowband filters and half-mirrors, they isolate and reflect the optical signal used to pump the laser while allowing the laser's own signal light to pass through. This prevents damage from the pump light, ensuring stable operation and extending the laser's lifespan.

The upstream supply chain for Pump Protector primarily includes suppliers of optical materials, precision optical components, specialty optical fibers (such as ytterbium-doped fibers), metal packaging materials, and semiconductor laser chips. Downstream, they directly serve fiber laser and fiber amplifier manufacturers, with applications in telecommunications infrastructure, data center interconnects, high-end manufacturing, and medical devices.
