## Abstracts

The global Pure Carbon Slider market size is predicted to grow from US\$ 97 million in 2025 to US\$ 116 million in 2032; it is expected to grow at a CAGR of 2.6% from 2026 to 2032.

In 2025, global Pure Carbon Slider Insulated Water Bottle production reached approximately 990k units, with an average global market price of around US\$100.6 per unit.

Pure Carbon Slider is a widely used sliding current-collecting component in rail transit and industrial power-collection systems. It is primarily made of carbon/graphite (without metal impregnation, or with only minimal functional additives), leveraging carbon's self-lubrication, low friction, and strong heat/arc resistance to maintain stable electrical transfer and mechanical sliding contact between the pantograph and the catenary (or conductor rail/trolley wire). Compared with metal-impregnated sliders, pure-carbon sliders are often preferred for better contact-wire friendliness (reduced wear on copper contact wires), lower noise, and predictable wear behavior, while high-current/high-power or extreme-duty scenarios may require careful optimization of formulation, structure, and maintenance strategy to manage contact resistance and temperature rise.

Upstream for Pure Carbon Sliders mainly covers carbon-based feedstocks and forming aids, such as natural/synthetic graphite, petroleum coke/needle coke, pitch or resin binders, toughness/lubricity additives (depending on proprietary formulations), as well as energy and furnace equipment for heat treatment/graphitization. Midstream manufacturing typically includes compounding and kneading, pressing/extrusion forming, baking, impregnation (usually resin/pitch rather than metal), graphitization, precision machining, and inspection. Downstream applications are concentrated in pantograph strips for railway and urban rail rolling stock, and also extend to industrial

current-collection systems (cranes, ports, mining equipment, etc.).

Representative upstream suppliers include SGL Carbon, GrafTech, Tokai Carbon, Fangda Carbon, and major refinery/petroleum-coke supply chains; typical downstream industry players include CRRC, Alstom, Siemens Mobility, Hitachi Rail, Stadler, and regional pantograph/current-collection system suppliers serving rail operators.

The annual production capacity of a single-line Pure Carbon Slider is approximately 10k unit, with a gross profit margin of approximately 20%-40%
