The global Pure Nickel Strips market size is predicted to grow from US\$ 1125 million in 2025 to US\$ 1708 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

Pure nickel strip is a high-purity nickel metal product, made into thin, flat strips for applications requiring corrosion resistance, electrical conductivity, and high-temperature stability. It is widely used in batteries, electronic components, chemical equipment, and aerospace. The pure nickel strip industry chain includes upstream nickel smelting and refining, alloying, and surface treatment; midstream manufacturing encompasses rolling, annealing, slitting, and precision cutting; and downstream applications include battery production, electronic components, chemical equipment, and aerospace manufacturing. Supporting services include quality inspection, coating treatment, packaging, and logistics. In 2025, global pure nickel strip production was approximately 32,900 tons, with a global average market price of approximately US\$35 per kilogram. The gross profit margin of major companies in the industry ranged from 20% to 40%. In 2025, global pure nickel strip production capacity was approximately 41,100 tons.

The Pure Nickel Strip market is driven by increasing demand in the battery and electronics industries, especially for electric vehicles and renewable energy storage. Growth is supported by advances in nickel refining, precision rolling, and surface treatment technologies. Manufacturers focus on material purity, consistency, and supply chain reliability to meet industrial and aerospace standards.
