POE film has high water resistance and high PID resistance, and is suitable for high-efficiency photovoltaic modules. POE film is a photovoltaic encapsulation film. Compared with EVA film, POE film has better aging resistance, low water vapor transmission rate and PID resistance. Its water vapor transmission rate is only about 1/8 of that of EVA film, and POE film will not decompose and produce acetic acid when it comes into contact with water, which can effectively reduce the PID effect. With its excellent comprehensive performance, POE film is mainly used in high-efficiency photovoltaic modules such as double-glass and N-type, which can effectively improve the service life and power generation efficiency of photovoltaic modules.

The global Pure POE Film market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
