Pure water preparation system is an instrument that uses physical/chemical methods to remove soluble substances in water. The pure water preparation system processes tap water, well water and other water sources into high-purity water through a series of process processes such as filtration, reverse osmosis, ion exchange, etc. The system mainly relies on reverse osmosis membrane technology. By applying a certain pressure, water molecules and ionized mineral elements pass through the reverse osmosis membrane, while most inorganic salts (including heavy metals), organic matter, bacteria, viruses, etc. dissolved in the water cannot pass through the reverse osmosis membrane, thereby achieving water purification.

The global Pure Water Preparation System market size is projected to grow from US$ million in 2024 to US$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
