Push-to-talk (PTT) over WiFi refers to a communication method that enables users to initiate voice transmissions by pressing a button, rather than continuously transmitting like in traditional phone calls. When using WiFi, PTT leverages a wireless network connection instead of cellular networks. It allows for instant communication over local or wide area networks, facilitating efficient group conversations and coordination, especially in environments where real-time communication is crucial, such as in emergency services, logistics, or team-based activities. This technology is often used in applications like voice messaging apps, walkie-talkie style devices, or specialized communication systems for businesses.

Global Push-To-Talk key players include AT&T, Verizon, NII Holdings, Sprint Corporation, etc. Global top four manufacturers hold a share about 55%.

North America is the largest market, with a share over 60%, followed by Central & South America and Europe, both have a share about 25 percent.

In terms of product, LMR is the largest segment, with a share over 65%. And in terms of application, the largest application is Public Safety, followed by Transport, Business and Commerce, Government, etc.
