Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

A push walker is a device designed to assist toddlers and young children in learning to walk. It typically consists of a frame with wheels and a handle, allowing the child to hold onto the handle while pushing the walker along. Push walkers provide stability and support as children develop their balance and coordination skills, allowing them to gradually gain confidence and independence in walking. They are often used as a transitional aid between crawling and walking independently.

The global Push Walker market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
