Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Put to Light System market.

Put to Light systems are an effective automated sortation method to break larger quantities of product into individual customer orders, using light devices to direct operators to 'put' items. Sometimes the Put to Light approach is referred to as 'scan and sort'. Merchandise that is typically batch picked beforehand is brought to a put station. Operators scan bar codes on individual pieces of merchandise, then lights turn on at any individual customer orders requiring that product.

Based on business rules and the put to light device used, operators might also have the ability to short a put to a container or split a put across multiple containers for the store or order. Other features within put to light include closing containers, indication of a full container to close, opening a new container and configurable scan verification as you

open a container for the location.
