The global PV Power Station Operator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Solar energy is radiant light and heat from the sun harnessed using a range of ever-evolving technologies such as solar heating, photovoltaics, solar thermal energy, solar architecture and artificial photosynthesis.

It is an important source of renewable energy and its technologies are broadly characterized as either passive solar or active solar depending on the way they capture and distribute solar energy or convert it into solar power. Active solar techniques include the use of photovoltaic systems, concentrated solar power and solar water heating to harness the energy. Passive solar techniques include orienting a building to the Sun, selecting materials with favorable thermal mass or light dispersing properties, and designing spaces that naturally circulate air.

The large magnitude of solar energy available makes it a highly appealing source of electricity. The United Nations Development Programme in its 2000 World Energy Assessment found that the annual potential of solar energy was 1575 – 49387 EJ. This is larger than the total world energy consumption (the total energy consumed by the world within a year) in 2012, which was 559.8 EJ.

Global PV Power Station Operator key players include Enerparc AG, Rete Rinnovabile, Enel Green Power, T-Solar, Fotovatio (FSL), etc.

China is the largest market, with a share about 30%, followed by Japan, and USA, both have a share over 30 percent.
