The global PVA Optical Film for LCD Display market size is predicted to grow from US\$ 1072 million in 2025 to US\$ 1440 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

PVA optical film for LCD displays refers to a polyvinyl alcohol based optical functional film used in LCD polarizers. It is generally produced through film casting, stretching orientation, dyeing, and laminating processes, and serves as one of the core functional layers that enable polarization selection, optical modulation, and image display in liquid crystal displays. With strong optical performance, high light transmittance, and good process compatibility, it is widely used in LCD applications such as televisions, monitors, notebook computers, tablets, and automotive displays. In 2025, the global output of PVA optical film for LCD displays reached 380 million square meters, with an average selling price of USD 2.88 per square meter.

PVA optical film is the core membrane material of polarizers, which are key materials in liquid crystal displays. Polarizers are composed of multiple film layers, and raw materials account for 80% of total production cost. The main raw materials include TAC film, optical-grade PVA film, pressure-sensitive adhesive, protective film, and release film. Among them, TAC film accounts for around 50% of cost, optical-grade PVA film accounts for 12%, adhesive accounts for 5% to 10%, protective film and release film account for 15%, chemical materials account for 5%, and other costs account for 10%. Due to the high technical barriers of PVA optical film, the global market has long been dominated by Japanese companies. Kuraray accounts for more than 64% of global capacity and Mitsubishi Chemical Corporation accounts for 28%, with the two companies together holding the vast majority of the global market. At the same time, Kuraray also holds a leading position in the PVA raw material segment used for film

production. In China, only Wanwei High-Tech, Chang Chun Group in Taiwan, China, and Sinopec Chongqing SVW Chemical Co., Ltd. currently have some supply capability, mainly providing small volumes of narrow-width film for the mid- to low-end market, with a combined market share of less than 9%. Overall, the number of companies worldwide capable of stable supply remains very limited.

As global liquid crystal display capacity continues to shift to China, competition in the domestic polarizer market has become increasingly intense. Downstream manufacturers are placing stricter requirements on cost control, and demand for localization of upstream raw materials is becoming more urgent. In this context, the importance of localized supply capability for PVA optical film, as a key raw material, continues to rise. Based on interviews and industry information, consumption of PVA optical film for polarizers in China reached about 200 million square meters in 2025. Given that Kuraray and Mitsubishi Chemical Corporation together held more than 93% of the China market, and based on interview-based estimates covering five companies, the average market price in China in 2025 was about RMB 21 per square meter, corresponding to a China market size of about RMB 4.2 billion.
