Polyvinyl butyral (or PVB) is a resin mostly used for applications that require strong binding, optical clarity, adhesion to many surfaces, toughness and flexibility. This report mainly studies PVB dispersions market. PVB Dispersions are stable aqueous emulsions of plasticized PVB(polyvinyl butyral).

PVB dispersions industry is a sunrise industry, and the market growth point is coming. However, there is currently a very high concentration of manufacturing due to technical barriers and risks to product stability. Leading companies like Aquaspersions have won a good reputation from customers by building brand advantages and expanding market channels, in this regard, both in terms of product technology accumulation and product branding. Chinese companies are clearly lagging behind. At present, Chinese manufacturers are expanding their market share by releasing more production capacity, but they are limited by technology and demand. Marketing has been slow in recent years. At the same time, it is necessary for Chinese manufacturers to improve their technology, mainly in terms of product adhesion and gloss, which has a lot of room for improvement. In terms of regions, Europe is the largest producer and consumer of PVB dispersions, followed by North America and China.
