PVC chipless cutting machine is a high-precision equipment specially used for cutting polyvinyl chloride (PVC) pipes or profiles. Its core feature is that it does not generate chips or dust during the cutting process. The equipment usually adopts planetary cutting, thermal separation, rotating cutter or pull-off cutting technology, and achieves a smooth, burr-free and deformation-free cutting effect through synchronous control and infrared preheating, servo drive and other methods. Compared with traditional saw blade cutting, chipless cutting not only improves product quality, but also reduces material waste, cleaning and maintenance costs. It is widely used in the downstream processes of plastic pipe extrusion production lines, especially for occasions with high requirements for cleanliness, dimensional accuracy and production efficiency.
