The global PVC Flange market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A flange is a type of pipe joint that is used to connect pipes or to close the end of pipes and is characterized by its flange-like shape. PVC is one of the five most inexpensive general-purpose resins, along with polypropylene (PP), polystyrene (PS), and polyethylene (PE), and is in high demand.

Uses of PVC flanges include piping flanges for chemical plants, semiconductor-related plants, and seawater piping flanges. This is because the excellent corrosion resistance of this material prevents it from being corroded by acidic or alkaline chemicals or seawater.

United States market for PVC Flange is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
