The global PVC Free Resilient Flooring market size is predicted to grow from US\$ 747 million in 2025 to US\$ 904 million in 2031; it is expected to grow at a CAGR of 3.2% from 2025 to 2031.

PVC stands for polyvinyl chloride or vinyl. This ingredient is found in products such as vinyl, luxury vinyl tile, vinyl composition tile, sheet vinyl, etc. Vinyl is a man made chemical that studies have shown releases dioxins that are persistent in the environment. There are also life cycle implications of PVC as it has a high chlorine content and phthalates, and it's very difficult to recycle. Thus, PVC-free products are specifically products that do not contain polyvinyl chloride. Their ingredients vary and can range from alternative chemical compositions, to bio-based products.

With the increasing awareness of environmental protection, PVC-free resilient flooring is gradually gaining prominence in the market. This type of flooring is known for its absence of harmful polyvinyl chloride (PVC) materials, making it an eco-friendly choice for indoor flooring. Compared to traditional PVC flooring, PVC-free resilient flooring offers significant advantages in indoor air quality and health. They typically utilize new materials and manufacturing processes that reduce the emission of harmful gases, thereby contributing to the creation of a healthier indoor environment. Furthermore, PVC-free resilient flooring also offers greater design diversity to meet the aesthetic preferences of different consumers, making it increasingly popular in the market.
