In 2025, the global production capacity of PVC Gastric Tube was approximately 2.18 billion units.

PVC Gastric Tube is a disposable medical tube used for gastric decompression, enteral feeding, gastric lavage, drainage, and clinical fluid administration. It is commonly made from medical-grade PVC and requires biocompatibility, flexibility, transparency, and stable dimensional accuracy.

The industrial chain covers upstream medical PVC resin, plasticizers, tubing additives, packaging films, and sterilization materials; midstream extrusion, tip forming, side-hole punching, marking, assembly, inspection, sterilization, and packaging; downstream hospitals, emergency departments, ICUs, nursing institutions, and medical consumable distributors.

Clinical hospitalization care, chronic patient home nursing and gastrointestinal intervention needs support the steady consumption of PVC stomach tubes. The product features soft texture, smooth passing and good biocompatibility to meet conventional gastric drainage and feeding demands. Safety material improvement and sizing standardization further ensure clinical use safety.
