The global PVC Nasopharyngeal Airway market size is predicted to grow from US\$ 141 million in 2025 to US\$ 218 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

In 2025, global sales of PVC nasopharyngeal airways reached 180 million units, with an average selling price of US\$0.8 per unit. PVC nasopharyngeal airways are disposable sterile airway management devices made of medical-grade polyvinyl chloride. Inserted into the pharynx through the nasal cavity, they physically support the upper airway and relieve upper airway obstruction caused by tongue retraction. They are characterized by good biocompatibility, moderate flexibility, ease of operation, and controllable cost. Primarily used in emergency care, clinical anesthesia, intensive care, and basic airway support scenarios, they are suitable for different sizes and needs of adults, children, and newborns. They are essential basic ventilation consumables for medical institutions and pre-hospital emergency systems, quickly establishing temporary ventilation channels to reduce the risk of suffocation. Global total production capacity is 210 million units, with an industry average gross profit margin of 35%. The upstream raw material is medical-grade... The upstream material consumption of PVC particles, plasticizers, stabilizers, and aseptic packaging materials is mainly medical-grade PVC particles, accounting for 70%, plasticizers and stabilizers for 20%, and packaging materials for 10%. Downstream supply targets hospital emergency departments, anesthesiology departments, ICUs, primary healthcare institutions, pre-hospital emergency care institutions, and medical consumables distributors. The downstream consumption structure is as follows: general hospitals 60%, primary healthcare institutions 25%, emergency centers 12%, and other medical scenarios 3%. Future development focuses on low-irritant modified materials, aseptic upgrades, refined specifications, and biodegradable alternatives. Demand and business opportunities come from the

improvement of the global emergency care system, the improvement of primary healthcare configuration, the increase in surgical volume and the popularization of disposable consumables, coupled with the market space brought about by the upgrading of compliance standards and domestic substitution.

The global PVC nasopharyngeal airway market is experiencing steady growth, driven by improvements in global emergency medical systems, expansion of anesthesia and intensive care units, and increased penetration of disposable sterile consumables. The Asia-Pacific region, as an emerging growth engine, is seeing significant growth in China, India, and Southeast Asia. Improved primary healthcare infrastructure and the development of pre-hospital emergency networks will continue to generate incremental demand. Competition is characterized by both globalization and regional concentration. International giants leverage their brand and channel advantages to dominate the high-end market, while domestic companies are rapidly breaking into the low-to-mid-range and export segments with high cost-performance ratios. Domestic substitution and supply chain localization are key variables in the industry.

On the supply chain side, fluctuations in the cost of upstream raw materials such as medical PVC particles and plasticizers affect industry profits. The Yangtze River Delta and Pearl River Delta chemical and medical consumable clusters in China have well-developed supporting facilities, enabling stable supply and cost optimization. Downstream, general hospitals are the main players, with primary healthcare institutions, emergency centers, and overseas distributors constituting important growth drivers.

Future directions will focus on low-irritant modification, cost reduction of bio-based materials, precise adaptation of multiple specifications, and replacement of biodegradable materials to meet environmental compliance trends; at the same time, intelligent and aseptic packaging upgrades will increase product added value and bring new growth poles to the industry.
