The global PVC Wire and Cable market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

PVC is not environmentally friendly. In the formulation process of PVC wire and cable materials, most of the plasticizers added during production belong to environmental hormones, which affect development and fertility. There are many restrictive regulations on the use of PVC in Europe and the United States. With the implementation of EU ROHS and REACH environmental protection regulations, people pay more attention to the environment and life safety, and the environmental protection requirements of electronics and living products are getting higher and higher. The application of PVC plastics will be subject to more and more restrictions. Due to environmental protection policies, a large number of cable and wire products have begun to be produced with environmentally friendly materials to replace PVC cables.

PVC Wire and Cable refers to wires and cables that use PVC as a protective layer.
