PVC/EVOH/PE packaging materials are multi-layer functional packaging materials made of polyvinyl chloride (PVC), ethylene-vinyl alcohol copolymer (EVOH) and polyethylene (PE) through a composite process. They usually use PVC as the outer layer to provide rigidity and chemical resistance, EVOH as the middle layer to play an oxygen and odor barrier role, and PE as the inner layer to achieve heat sealing and flexibility. They are widely used in packaging in food, daily chemicals, industry and other fields. They have barrier properties, structural strength and processing adaptability, but attention should be paid to the compliance restrictions and environmental protection considerations of PVC in food contact scenarios.

United States market for PVC/EVOH/PE Packaging is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
