The global PVD Decorative Coating market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Physical vapor deposition (PVD) decorative coating is a surface coating prepared by physical vapor deposition technology to enhance the performance and aesthetics of material surfaces. PVD is a high-tech thin film deposition technology, usually performed in a vacuum environment. It involves heating a solid material to evaporation temperature and then depositing it in the form of atoms or molecules on the surface of a substrate to form a thin and uniform coating. PVD decorative coatings can give the substrate different colors, hardness, wear resistance, corrosion resistance and other specific functional properties. These coatings are commonly used on a variety of products including jewelry, watches, hardware, auto parts, kitchen appliances, and more to enhance their durability, appearance, and value.
