The global PVD & Electroplating for Injection Plastics market size is predicted to grow from US$ 808 million in 2025 to US$ 1325 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

PVD & Electroplating for Injection Plastics refers to advanced surface treatment processes applied to injection-molded plastic components, combining physical vapor deposition (PVD) and electroplating techniques. These processes create a thin, uniform metallic or decorative coating on plastic surfaces, enhancing aesthetic appearance, corrosion resistance, wear resistance, and electrical conductivity, and are widely used in automotive parts, consumer electronics, and decorative plastic products.

Upstream, the industry relies on suppliers of high-purity metals (nickel, chrome, copper), chemical plating solutions, vacuum coating equipment, injection-molded plastic parts, and process automation systems. Downstream, the coated components are supplied to automotive manufacturers, consumer electronics brands, appliance producers, and decorative product companies, who require high-quality, visually appealing, and durable plastic parts.

United States market for PVD & Electroplating for Injection Plastics is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for PVD & Electroplating for Injection Plastics is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
