The global PVDF Fluorocarbon Coating market size is predicted to grow from US\$ 1336 million in 2025 to US\$ 1879 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

PVDF is one of the most important raw materials of fluorocarbon coatings, fluorocarbon coatings prepared with its raw materials have been developed to the sixth generation, because PVDF resin has superior weather resistance, can be used outdoors for a long time, without maintenance, such coatings are widely used in power stations, airports, highways, high-rise buildings and so on. Fluorocarbon coating refers to a series of coatings with fluorine resin as the main film-forming material. It is a new coating material modified and processed on the basis of fluorine resin. Its main feature is that the resin contains a large number of F-C bonds, and its bond energy is 485KJ/mol, which is the first in all chemical bonds. Under the action of heat and light (including ultraviolet), F-C is difficult to break, so it shows ultra-long weather resistance and chemical medium corrosion resistance, so its stability is the best of all resin coatings. This basically determines that it has better performance than other types of coating materials in general, so it is called "paint king". The coating is the best building material topcoat with good anti-corrosion, wear resistance, pollution resistance and durability. PVDF fluorocarbon paint is a high-end paint that needs to be baked at a high temperature (230 °C) for 15 minutes to cure. It is widely used in aluminum plate, aluminum alloy and other metal substrates. Fluorocarbon paint film shows a metallic luster, has excellent decorative, is the first choice of aluminum veneer curtain wall coating. Its excellent solvent resistance, chemical resistance, UV resistance and mechanical strength enable it to maintain excellent performance in harsh environments.

Industry driving factors: (1) The high-end development of the construction industry: the

requirements for aesthetic and durability of building exterior wall decoration are increasing, PVDF fluorocarbon paint can meet the harsh requirements of high-end buildings for color, gloss, weather resistance, and become the preferred material for building curtain walls. (2) The growth of demand for anti-pollution in the industrial field: in the chemical, petroleum, Marine and other industrial fields, equipment and components are exposed to harsh environments for a long time, and the excellent protection performance of PVDF fluorocarbon coatings effectively extends the service life of equipment and reduces maintenance costs. (3) Old building renovation: In the process of old building renovation, PVDF fluorocarbon paint can effectively improve the appearance and performance of the building and extend the life of the building.
