PVG proportional valve is a commonly used hydraulic control component, and its full name is Proportional Valve Group, also known as Proportional Valve Group. It is usually used in hydraulic systems to control actuator components (such as hydraulic cylinders, hydraulic motors, etc.) by controlling the flow and pressure of hydraulic oil. The PVG proportional valve is composed of valve body, valve core, electromagnet, position sensor, and other components. By changing the current signal of the electromagnet, the position of the valve core can be controlled, thereby changing the flow and pressure of hydraulic oil and achieving control of the actuator. PVG proportional valves have the characteristics of fast response speed, high accuracy, and good stability, and are widely

used in various hydraulic systems, such as machine tools, metallurgical equipment, ships, aerospace, and other fields.
