## Abstracts

The global PVQ Steel Plate market size is predicted to grow from US\$ 1150 million in 2025 to US\$ 1921 million in 2031; it is expected to grow at a CAGR of 8.9% from 2025 to 2031.

PVQ is an acronym for Pressure Vessel Quality. That means any steel plate using this designation is designed for use in pressure vessels. These pressure vessels are normally some type of closed container meant to hold any gas or liquid that is held at a pressure much different than its surrounding ambient pressure.

The global pressure vessel market is mainly concentrated in Europe and the United States, Japan and South Korea, India and China. Among them, the pressure vessel manufacturing industry in Europe, America and Japan has been in a leading position in the international arena, mainly producing medium and high-end products in the industry. China's pressure vessel industry is big but not strong, in terms of technical strength, product quality and other aspects of the international leading enterprises there is a certain gap. Investment growth in the energy and chemical sectors has driven the development of the pressure vessel industry in recent years, including the expansion of power generation capacity in the Asia-Pacific region and the increase in chemical projects in the Middle East. According to the '2022 BP World Energy Statistics Yearbook', the global energy exporters are mainly distributed in the Middle East, Russia, Africa, South America and Central America, energy importers are mainly distributed in Europe, China, India, other Asia-Pacific countries and North America, the regional development of the pressure vessel market will be further developed with the increase in regional energy imports.
