## Abstracts

The global Pyrgeometer market size is predicted to grow from US\$ 24.72 million in 2025 to US\$ 31.59 million in 2032; it is expected to grow at a CAGR of 3.6% from 2026 to 2032.

A pyrgeometer is a device that measures near-surface infra-red (IR) radiation, approximately from 4.5  $\mu$ m to 100  $\mu$ m on the electromagnetic spectrum (thereby excluding solar radiation). It measures the resistance/voltage changes in a material that is sensitive to the net energy transfer by radiation that occurs between itself and its surroundings (which can be either in or out). By also measuring its own temperature and making some assumptions about the nature of its surroundings it can infer a temperature of the local atmosphere with which it is exchanging radiation. Since the mean free path of IR radiation in the atmosphere is ~25 meters, this device typically measures IR flux in the nearest 25 meter layer.

United States market for Pyrgeometer is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
