The pyrolysis carbonization system equipment is a complete set of equipment that performs thermochemical conversion on organic waste (such as biomass, plastics, sludge, etc.) in a high-temperature oxygen-free or low-oxygen environment. Its core includes a feed unit, a closed reactor, a heating module, a gas purification system, and a product collection unit. The system decomposes organic matter into products such as biochar, combustible gas, and tar under the condition of isolating oxygen. It has the functions of waste reduction, resource utilization, and energy recovery, and is widely used in environmental protection treatment, soil improvement, and renewable energy production.
