The PZT piezoelectric ceramic refers to a type of piezoelectric ceramic material made of lead zirconate sodium titanate ceramics, which has good piezoelectric performance, thermal stability, chemical stability and mechanical strength. PZT piezoelectric ceramics are sintered at high temperature by three kinds of oxides of the same or different proportions - lead oxide (PbO), sodium titanate (TiO₂) and sodium zirconate (ZrO₂). Under the action, a polarization phenomenon and a piezoelectric effect will occur,

causing the ceramic body to produce charge distribution and size changes, thereby realizing the functions of electrical-mechanical conversion and mechanical-electrical conversion.
