## Abstracts

The global Quad Matched Resistors market size is predicted to grow from US\$ 172 million in 2025 to US\$ 323 million in 2032; it is expected to grow at a CAGR of 9.4% from 2026 to 2032.

In 2025, global sales of Quad Matched Resistors reached approximately 880 million units, with an average market price of about USD 0.2 per unit, an annual production capacity of roughly 940 million units, and an industry-average gross margin of approximately 35%.

A Quad Matched Resistor is a component in which four resistive elements are integrated in a single chip or package and are tightly matched in resistance value, tolerance, temperature coefficient (TCR), and long-term stability. It is designed to provide highly consistent ratios or tracking among the four resistors. Compared with using four discrete resistors, a quad matched resistor maintains resistor ratios or absolute matching much better over temperature, time drift, and process variations. Typical applications include instrumentation amplifiers, differential amplifiers, precision bridges, DAC/ADC reference networks, and gain-setting networks in high-precision analog circuits.

Upstream, the supply chain mainly involves high-stability resistive film materials (metal film, metal foil, thin-/thick-film pastes), high-precision ceramic or organic substrates, packaging materials (lead frames, molding compounds), and precision laser-trimming and test equipment. The midstream consists of specialized precision resistor/resistor-network manufacturers that deposit films on substrates, pattern them, laser-trim to target values, screen for matching parameters, and package them into quad matched resistor devices. Downstream, high-end analog module makers, industrial control and

test-measurement OEMs, telecom/networking equipment vendors, medical electronics, and automotive electronics (e.g., sensor-signal conditioning modules) purchase these parts in volume. Consumption is closely tied to shipment volumes of precision analog front-ends, measurement instruments, and industrial automation systems, with steady, BOM-driven unit consumption on each assembled PCB.

United States market for Quad Matched Resistors is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Quad Matched Resistors is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
