Quadrupole mass filter is the key component of modern mass spectrometer. QMF uses direct current (DC) electric field and alternating current (AC) electric field to analyze positive ions or negative ions by mass load ratio. QMF consists of four parallel bars with equal spacing, and the ratio of the radius of the bar to the radius of the inscribed circle is 1.148. The frequency range of the AC component of the electric field is usually between 1 and 10 MHz.
