The global Quantum Cascade Lasers market size is predicted to grow from US\$ 300 million in 2025 to US\$ 343 million in 2031; it is expected to grow at a CAGR of 2.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Quantum cascade lasers (QCLs) are semiconductor lasers that emit in the mid- to far-infrared portion of the electromagnetic spectrum.

Unlike typical interband semiconductor lasers that emit electromagnetic radiation through the recombination of electron–hole pairs across the material band gap, QCLs are unipolar and laser emission is achieved through the use of intersubband transitions in a repeated stack of semiconductor multiple quantum well heterostructures.

North America held the largest share of the quantum cascade lasers market due to the high technological adoption of QCLs in industrial, medical, and military and defense industries in the region. APAC is expected to witness the highest growth rate between 2018 and 2023 due to the presence of industrially developing economies in this region such as China and India.
