The global Quantum Computing Teaching and Research System market size is predicted to grow from US$ 90.35 million in 2025 to US$ 377 million in 2032; it is expected to grow at a CAGR of 21.3% from 2026 to 2032.

The Quantum Computing Teaching and Research System is an integrated educational platform developed for universities and research institutions to address the dilemma of "theoretical abstraction and difficulty in practical application" in quantum computing teaching. By constructing a complete chain solution from basic theory to hardware practice, it provides an independent and controllable educational foundation for cultivating strategic quantum technology talents for the nation.

In terms of functional architecture, this type of system typically features a full-stack software environment and abundant teaching resources. Its core modules include a drag-and-drop graphical programming interface for quantum circuits and a code programming training environment supporting languages ??such as Python/C++, meeting the diverse needs of beginners to professional developers. Simultaneously, the platform provides a systematic collection of quantum course videos, courseware resources, and teaching project examples to help universities quickly establish their own customized quantum computing teaching systems. Furthermore, the teaching management system and code quality evaluation system can quantitatively analyze and provide feedback on the teaching process and programming quality, achieving "teaching based on learning."
