Quantum imaging devices are advanced imaging systems that leverage quantum properties of light and particles—such as entanglement, superposition, and photon correlations—to achieve imaging performance beyond the limits of classical optics. These devices enable ultra-low light imaging, non-line-of-sight vision, enhanced medical diagnostics, and high-resolution sensing across defense, healthcare, and industrial applications.In 2024, global production of quantum imaging devices reached approximately 12,500 units, with an average global market price of around USD 85,000 per unit. The global annual production capacity was estimated at 20,000 units, and the gross margin of leading manufacturers ranged between 40–55%, depending on device complexity and end-use sector.

United States market for Quantum Imaging Devices is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Quantum Imaging Devices is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Quantum Imaging Devices is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
