The global Quantum Information System Service market size is predicted to grow from US\$ 3034 million in 2025 to US\$ 11279 million in 2032; it is expected to grow at a CAGR of 20.9% from 2026 to 2032.

Quantum information system services refer to professional services that utilize cutting-edge technologies such as quantum computing, quantum communication, and quantum sensing to provide computing, data processing, and secure communication solutions. These services, delivered through quantum computers, quantum networks, and related software platforms, enable businesses and research institutions to solve complex problems that are difficult to address with traditional computing methods, achieving more efficient data processing and more secure communication. Quantum information system services aim to drive technological innovation and industrial applications, improving the capabilities of various industries in computing power, data analysis, and information security.

The upstream of the quantum information system service industry chain primarily includes the supply of quantum chips and devices (superconducting, ion trap, photonic quantum, etc.), cryogenic refrigeration equipment, precision measurement and control electronics, lasers and optical devices, and basic software and algorithm frameworks; the midstream consists of quantum information system service providers, offering quantum computing cloud services, quantum algorithm and application development, quantum communication system integration, quantum security solutions, and operation and maintenance and technical support; downstream applications cover research institutions, government and defense, financial risk management and optimization computing, pharmaceutical and materials research and development, and energy and transportation optimization. Due to high technological barriers, significant R&D

investment, and the service being primarily software and system integration-based, the overall gross profit margin of the industry is significantly higher than that of traditional IT hardware, with quantum software and cloud services typically having gross profit margins in the 60%-80% range.

Quantum information system services are ushering in a new era of computing and communications, with the potential to significantly increase computing power and processing speed, as well as provide unprecedented information security. As quantum technology continues to mature, these services will disrupt the way traditional industries operate, solve complex problems that are currently unsolvable, and promote the development of emerging applications. Although still in its early stages, advances in quantum information system services will bring about far-reaching technological changes and economic impacts, making it an important pillar of future information technology.
