The global Quartz Flexible Accelerometer market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

With the development of low-cost inertial systems, new non-liquid floating so-called dry accelerometers started to appear in the mid-1960s. Since these instruments use flexure support technology, they are called quartz flexure accelerometers and their structure and process are greatly simplified. Currently these quartz flexural accelerometers are widely used in all kinds of modern inertial systems.
