The Quartz Tube Corona Discharge Ozone System consists of two electrodes, typically made of metal, inside the quartz tube. When a high voltage is applied to the electrodes, a corona discharge is initiated within the quartz tube. This discharge converts oxygen (O₂) molecules in the surrounding air into ozone (O₃) molecules. Quartz tube corona discharge ozone generators are known for their high efficiency and ozone production capacity. The use of a quartz tube provides excellent insulation, preventing electrical breakdown and ensuring a stable corona discharge. It also allows for a higher concentration of ozone to be produced. These ozone generators have various applications, including water treatment, wastewater treatment, air purification, and industrial processes that require high concentrations of ozone. They are commonly used in settings where a reliable and high-performance ozone generator is needed for continuous or intermittent ozone production.
