Abstracts

The global Quick-Fold Stroller market size is predicted to grow from US\$ 958 million in 2025 to US\$ 1327 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

In 2025, global production of quick-fold strollers reached 5.32 million units, with an average selling price of US\$184 per unit. Quick-fold strollers refer to wheeled infant carriers that can repeatedly switch between 'push mode' and 'folded storage mode,' significantly reducing their size after folding for easy carrying/placing in a trunk or public transportation space. This includes both seated strollers and reclining bassinet strollers. The upstream of the industry chain consists of aluminum alloy/steel tubing and connectors, plastic parts and injection molds, textiles and foam, and wheel sets/bearings/brake components; the midstream is OEM/ODM (with core capabilities in large-scale assembly, folding mechanism reliability, dynamic fatigue testing, and safety standard compliance); and the downstream consists of brands and distribution channels (maternal and infant chain stores, e-commerce, cross-border e-commerce, and leasing). Gross profit margins range from 20% to 45%.

From a global market perspective, North America and Europe have a stronger demand for 'travel/commuting and high-end' products, mature channels and safety certifications, and a stable replacement cycle for existing stock. Meanwhile, the Asia-Pacific region (especially China and Southeast Asia) is both an important base for supply and exports, and is driving increased sales in the mid-range price segment due to urbanization and refined childcare consumption. The advantages of quick-fold strollers are their portability and wide applicability, suitability for urban commuting, lower total cost of ownership, and ease of creating demand for a 'second stroller.' Driving factors include diversified urban travel options (public transportation/taxi/air travel), increased family preference for 'one-click folding + boarding-ready' experiences, lightweight materials and structural optimization, and price band reshuffling and regionalized procurement due to supply

chain and tariff/cost fluctuations.
