A quick folding gate, also known as a rapid folding gate or a fast-fold gate, is a type of security gate that is designed to open and close rapidly to allow or restrict access to a specific area. These gates are commonly used in various industrial, commercial, and public settings where efficient access control is important.

The primary characteristic of a quick folding gate is its ability to open and close quickly. This rapid operation is achieved through specialized mechanisms, such as high-speed motors, hydraulic systems, or counterweights. They are used to control access to specific areas. They can be operated manually, remotely, or automatically based on various triggers, such as sensors, keycards, or security personnel.

Quick folding gates are designed to take up minimal space when opened or closed. This can be especially useful in locations with limited space or areas where conventional swinging gates might not be practical. They are used in a variety of settings, including industrial facilities, manufacturing plants, logistics centers, commercial properties, airports, public transportation hubs, and more.
