Quick Test Sub is designed to save rig time while pressure testing a lubricator rig up, before exposing it to well pressure. When multiple wireline runs are required, the lubricator has to be tested each time the bottom connection is broken, and much time can be lost. After performing the first pressure testing of the whole string, subsequent pressure test can be made using the Quick Test Sub to verify the integrity of the joint disconnected, rather than testing the whole lubricator assembly.

Oil and gas companies are focusing on improving operational efficiency and reducing costs. Technologies such as data analytics, artificial intelligence, and automation are being employed to optimize production, enhance asset performance, and streamline operations. Energy efficiency measures are also being adopted to reduce environmental impact and improve sustainability. The oil and gas industry is witnessing a shift in investment priorities. Companies are increasingly allocating capital towards projects with shorter payback periods, lower breakeven costs, and higher returns on investment. This includes investments in unconventional resources, offshore deepwater projects, and natural gas developments.
