Difluoromethane is a halogenated hydrocarbon, referred to as R32. It is a gas at normal temperature and a colorless and transparent liquid under its own pressure. It is easily soluble in oil and difficult to dissolve in water. It is a refrigerant with zero ozone loss potential. Before R32 entered the stage of history, R22 refrigerant had dominated the air-conditioning industry for decades. However, due to its greater harm to the ozone layer, according to the Montreal Protocol and the Kyoto Protocol, the withdrawal time limit for R22 is getting closer and closer. In this context, R32, as a new generation of energy-saving, carbon-reducing, environmentally friendly, non-toxic refrigerant, has become a new choice.

The global R32 market size is projected to grow from US\$ 1471 million in 2024 to US\$ 1105 million in 2030; it is expected to grow at a CAGR of -4.7% from 2024 to 2030.
