The global Racing Clutches market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Racing clutches for high-horsepower race track applications and extreme street applications.

Carbon/Carbon: Extremely low inertia, high torque capacity, high heat capacity and smooth engagement characteristics. Found in road racing, endurance racing, off-road and high-performance street applications.

Metallic: The most common clutch type used in road racing and circle track racing. Not recommended for street use.

Cerametallic: Increased clutch modulation through thicker than sintered metallic discs. Provide higher heat capacity through their increased mass. Popular in applications such as rally, hill climb, club racing and street/strip.

The racing clutches market is fragmented with the presence of major key vendors and other prominent vendors. Vendors like Exedy Globalparts, ZF, and AP Racing dominates the market. These companies primarily focus on R & D for transmission, suspension, and drive technology which sets them apart from other vendors. For instance, AP Racing, which is a subsidiary of BREMBO, is one of the top technology experts in the high-performance clutch design and manufacturing.
